Midpoint Report

Team: Data Privacy: Policies and Methods (DPPM)

By: Tenzing R, He W, Jiacheng Z.

Updates to Project Objective:

Our team is still sticking to the same idea from the beginning of our first meeting. We are making a few adjustments here and there based on the research we've been doing so far. Overall the objective from our project plan remains the same.

Updates to Project Approach:

Our approach to the topic hasn't changed. We are researching articles/journals for info to support what we want to talk about to the class. We are struggling to find good, relevant articles for some of our topics, since there are so many articles to look at, but that's fine. We are using libraries like IEEE Xplore Digital Library, JSTOR library, Google Scholar etc. to conduct our research.

Updates to Team Structure:

We have now settled on a final structure for our team. Initially we didn't have a clear idea of each other's roles. For our research presentation we have all of us working on the research. Jiacheng will be in charge of the introduction, definitions, and will help support He in consideration to methods regarding data privacy. He will focus a majority of his research portion on the methods of data privacy including data collecting, location based services etc. Tenzing will focus her research on the policies regarding data privacy. She will focus on legislation proposed, GDPR, and the right to be forgotten. Also these roles for our presentation represent our roles for the final paper as to who will write what.

Progress Update:

Our team is making good progress. We plan to finish the research presentation on Thursday and review our slides and speech over the weekend. We are sticking to the project plan. We had hoped to be a little bit more done by now, but we're not behind the schedule so far. We are working on the contents of our paper and slides and making sure we all have a clear idea of who's writing what.

Scheduled Meeting with Kristen: July 25 2:30pm
